Yiftach Tiran is a VLSI Physical Design Lead and MBA student at Ben-Gurion University, where he also earned his degree in Electrical Engineering. With experience at leading tech companies like Intel, Nvidia, and Samsung, Yiftach has been at the forefront of innovation in semiconductor design and chip integration.

But beyond technology, Yiftach's story is deeply personal. As the first in his family to attend university, a proud father of two daughters, and a reservist, he represents the impact education can have across generations. His journey at BGU opened doors—not just professionally, but also in how he gives back. Today, he mentors young engineering students at BGU from underrepresented backgrounds and leads initiatives that combine AI, education, and social impact. Yiftach's connection to BGU is more than academic—it's a part of his identity, shaping his values and his future.
